COUNCIL MEETING

A meeting of the Village Council was held on Tuesday evening. The new councillors were sworn in and took over the affairs of the Village.

H. McKechnie was elected as Reeve and W. S. McCulloch re-appointed Sec-Treas. Several items of business were discussed and the financial standing of the Village gone into. It appears that the by-law respecting chimneys is not being lived up to and the offenders have been notified that they must observe the law and rectify the defects. The assessment will be made earlier this year.

he regular council meetings will be held on the first Thursday of each month.

The Russians continue their advance on the Riga front and have also made some gains in Bulgaria.

British make several big advances on the western front.

The German advance in Rumania has been checked at the Sereth River.

A German raider, in the south Atlantic, sinks or captures 15 ships. Nearly 300 survivors of the destroyed vessels have been landed in Brazil.

The total Canadian casualties is now 68,290, made up as follows: Killed 10,854; died of wounds 4,010; died of sickness 494; presumed dead 1,108; missing 2,970; wounded 48,454.

Practically one in every five of those who have enlisted in Canada figure on the casualty list. One surprising feature is the small number of deaths due to sickness.

(Continued)

"And he for me," the elder woman answered, "we have smoothed things for each other. Daphne has been with the remarks made by a character in a book I once read. She advised her daughter not to be a cushion for her husband; not to make things too soft for him, but to strengthen and help him. I am not really afraid you will be a cushion for Hugh."

"I don't like to be a cushion," Daphne shook her head. "I don't want to help Hugh to live up to the best in him; to follow himself in the highest way; to fulfill his noblest ideals. I shouldn't say all this to anybody but you, Aunt Mildred," she added shyly, "but you seem to understand."

"I do understand, and I think you are perfectly right," Mrs. Merivale smiled up into the girl's face, and her hand touched Daphne's hand on which rested her engagement ring. Raymond's niece was very dear to Raymond's wife, and when the girl became engaged to Hugh Brentwood, the rising young doctor of Stanburth, both she and her husband were satisfied that it was for Daphne's happiness. Brentwood's birth and breeding were unquestionable. It was prophesied that he would do well in his profession and in all probability rise to one of its high places; and he was endowed with a personal charm which made him popular wherever he went. He was now partner with a certain Mr. Barry, who possessed the largest practice in and around Stanburth, a big village which liked to be called a country town and had large aspirations.

The Merivale's house, Demberton Manor, stood about a mile and a half from the village, and was the ancestral seat of Demberton which gave it its name, and Mr. Merivale owned large tracts of land in the neighborhood, and he and his forefathers had been vicars of the parish for many and many a generation.

Mrs. Merivale and her niece were awaiting the arrival of the newcomer in the drawing room of the Manor, a delicious old-fashioned room which seemed to hold its atmosphere of fragrance and charm left by those men and women of bygone days who had lived and loved and suffered and died here long ago. From the bow window, whose low window seats were Daphne's favorite abiding place, her eyes wandered over a view which Mr. Merivale often declared was unsurpassed in the whole of the British Isles. The garden was in the foreground—a velvet lawn and beds and shrubbery which in a few months would be a blaze of rhododendrons.

"DEATH IN THE POT."

"Death in the pot." That sentence condenses the story of a tragedy. A little family gathered round the fire, crooked in the large copper kettle long disused, and the entire family poisoned by the accumulations of verdigris. The story was told by the newspapers. The moral of it is, that the purest of food, put into a foul vessel, may become a minister of death.

If the stomach is diseased it is like the poisonous kettle, which taints everything that goes into it. The symptoms are irregular appetite, under fullness after eating, distressed feeling in the stomach, of fluttering and sinking sensations, palpitation, dizziness, ringing in ears, sour or bitter risings and constipation. Not all these symptoms may be present at the same time, but any of them show disease in the digestive or alimentary tract.

The intimate relation of the stomach to the blood, heart, liver, and lungs makes it a medicinal maxim, "Start with the stomach." It is upon this principle that Dr. Pierce's Golden Medical Discovery effects so many and such remarkable cures. It cleanses the stomach and the system is cleansed. It increases the vitality of the digestive organs, and the body is enriched by the purified blood. It's a tonic and body builder that strengthens the digestive or nutritive organs and these strengthen the whole body by increasing the quantity and quality of its nourishment. It carries off the poisonous effects of indigestion, in this way it re-establishes health, banishing the bodily aches, which are but symptoms of the stomach's condition.

Get Dr. Pierce's Golden Medical Discovery from any medicine dealer to-day, in either liquid or tablet form. Send Dr. Pierce, Invalids' Hotel, Buffalo, N. Y., FRIDAY, JANUARY the 19th, 1917

Note and Comment

The woman who packs eggs when they are 20 cents a dozen and fills a crock with 15 cent butter, is the one who has no worries about the H. C. of L.

Quite smoothly the German minister in Switzerland tells the Swiss people that Germany will never violate the neutrality of Switzerland, because "Germany has formally resolved never to violate Swiss neutrality"—an assurance that will not bring much comfort to them when they remember what Belgium has suffered in the past two years, and Germany was also bound to protect the neutrality of Belgium.

Many a man's religion consists of putting in a good word when the collection plate is passed around.

Canada has 23,000,000 acres in timber reserves, as compared with 187,000,000 acres in the national forests of the United States.

"Slow but sure" is a good motto for the man who is satisfied with second prize.

We understand that a co-operative store has been organized here and that it is the intention of the promoters to have the business opened about the first of February. Although nothing definite has been given out, it is said that this new concern will carry on a general store business, groceries, dry-goods, etc.

As we take it, the Teutons are ready and willing to consider: Restitution, Reparation, Renunciation, Abdication, Adjudication, Abnegation, Negotiation, Restoration, Affiliation, Hallucination, Annexation, Conversation, Affiliation, Germanization, Assimilation, Depopulation, Deliberation, Humiliation, Annihilation, Deportation, Aggravation, Civilization, Capitulation, Devastation, Extermination, Expiation, Isolation, Pacification, Repudiation, Self-Preservation, Usurpation, —Chicago Tribune.

MEDICINE HAT—Second Tuesday in May and First Tuesday in December.

MACLEOD—Third Tuesday in May and First Tuesday in December.

LETHBRIDGE—Second Tuesday in February, Fourth Tuesday in May and Third Tuesday in November.

DATED at Edmonton, Alberta, this 28th day of December, 1916.

A. G. BROWNING,
Deputy Attorney General.

We have placed order for a carload of Ford Touring Cars and have two still unsold. Book your order now and get prompt delivery for spring. We are informed by

Calgary Branch that cars will be hard to get delivery of before summer.

Your neighbor is getting one; why don't you? If you have not received a copy of "Ford Times", the snappy little magazine devoted to Ford Cars and their owners, call in and we will see that you are put on our mailing list.

Artistic Job Printing our Specialty.**An Attractive Clubbing Offer**

Open to the readers of the Monitor News

By an arrangement we have entered into with the publishers of The Edmonton Bulletin we are able to offer The Bulletin, Morning, Evening or Semi-Weekly to the subscribers of the News.

For \$3.00 we will send the News and The Bulletin (Morning or Evening) for one year.

The regular price of The Bulletin is \$3.00 per year and the News is \$1.00 per year. You therefore save \$1.00 by subscribing for the two through us.

The Bulletin (Semi-Weekly) and the News for the year will cost only \$1.75.

Take the Morning or Evening Bulletin for a daily review of world events and the News for your local news.

The Semi-Weekly Bulletin is the only twice a week edition in Northern Alberta. It gives in condensed form all the news of the world. Its market reports are up-to-the-minute and absolutely reliable.

By reading the Monitor News and The Bulletin—either Daily or Semi-Weekly—you get all the news, both local and foreign through the best two papers in their respective fields.

Take Advantage of the Special Clubbing Offer To-Day!

Send all orders to the Monitor News.

(Continued)

"And he for me," the elder woman answered, "we have smoothed things for each other, Daphne. But I agree with the remarks made by a character in a book I once read. She advised her daughter not to be a cushion for her husband; not to make things too soft for him, but to strengthen and help him. I am not really afraid you will be a cushion for Hugh."

"I don't like to be a cushion," Daphne shook her head decidedly. "I want to help Hugh to live up to the best in him; to fulfill him in the highest way; to follow his noblest ideals. I shouldn't say all this to anybody but you, Aunt Mildred; she said shyly, 'but you seem to understand.'"

"I do understand, and I think you are perfectly right," Mrs. Merivale smiled up into the girl's face, and her hand touched Daphne's, resting her engagement ring. Raymond's niece was very dear to Raymond's wife, and when the girl became engaged to Hugh Brentwood, both she and her husband were satisfied that it was for Daphne's happiness. Brentwood's birth and breeding were unexceptionable. It was prophesied that he would do well in his profession and in all probability rise to one of its high places; and he was endowed with a personal charm which made him popular wherever he went. He was now partner with a certain Mr. Barry, who possessed the largest practice in and around Stanhurst, a big village which liked to be called a country town and had large aspirations.

The Merivale's house, Denbenton Manor, stood about a mile and a half from the village, and close to the hamlet of Denbenton, which gave its name, and Mr. Merivale owned large tracts of land in the neighborhood, and he and his forebears had been squire of the parish for many and many a generation.

Mrs. Merivale and her niece were waiting the arrival of the newcomers in the drawing room of the Manor, a delicious old fashioned room which seemed to hold in its atmosphere the fragrance and charm left by those men and women of bygone days who had lived and loved, suffered and been glad here long ago. From the window, whose low window seats were Daphne's favorite abiding place, the eyes wandered over a view which Mr. Merivale often declared was unsurpassed in the whole of the British Isles. The garden was in the foreground—a velvet lawn and beds of shrubberies which in a few months would be a blaze of rhododendrons.

"DEATH IN THE POT."

"Death in the pot!" That sentence condenses the plot of a tragedy. A little family gathering. A fine dinner cooked in the kitchen kettle, the food, the and the entire family poisoned by the accumulated veridigri. The story was told by the newspapers. The moral of it is, that the purest of food, put into a foul vessel, may become a minister of death.

If the stomach is diseased it is like the poisonous kettle, which taints everything that goes into it. The symptoms are irregular appetite, undue fullness after eating, distressed feeling in the stomach, of fluttering and sinking sensations, palpitation, dizziness, ringing in ears, sour or bitter risings and constipation. Not all these symptoms may be present at the same time, but any of them show disease in the digestive or alimentary tract.

The intimate relation of the stomach to the blood, heart, liver, and lungs makes it a medicinal maxim, 'Start with the stomach.' It is upon this principle that Dr. Pierce's Golden Medical Discovery effects so many and such remarkable cures. It cleanses the stomach and the system is cleansed. It increases the action of the blood-making glands, and the blood is purified by the purified blood. It's a tonic and blood builder that strengthens the digestive or nutritive organs and these strengthen the whole body by increasing the quantity and quality of its nourishment. It carries off the poisonous, effete matter. In this way it re-establishes health, banishing the bodily aches, which are but symptoms of the stomach's condition.

Get Dr. Pierce's Golden Medical Discovery from any medicine dealer today, in either liquid or tablet form. Send Dr. Pierce, Invalids' Hotel, Buffalo, N. Y., 30 cents for 'Medical Adviser,' cloth-bound and illustrated.

Constipation causes and seriously aggravates many diseases. It is thoroughly cured by Dr. Pierce's Pills. One laxative; two or three a cathartic.

W. N. L. 1076

But beyond the garden was broken wooded ground, which sloped with a certain abruptness to the west, and the west, a level plain of pasture and woodland stretched in a wide infinity of space to the blue hills in the distance—an infinity which gave one a sense of height almost comparable to the sea.

From her advantage round in the window Daphne could see the bend in the drive on the far side of the house, and presently she sprang to her feet, exclaiming:

"The carriage has just turned into the drive. Shall you get up from the sofa?"

"Yes." A little tremulously Mrs. Merivale rose, and it seemed both to her and Daphne as if only a few seconds had ticked by upon the clock before the drawing room door opened, and when Mr. Merivale's voice said cheerily: "Here she is—very tired and very glad to be at home."

A tall woman in black came towards them with a hesitating movement, and Mrs. Merivale went to her quickly. "My dear child," she exclaimed, putting her arms out to the stranger, and drawing her face down to be kissed—and only Daphne noticed the little gasp of surprise in her aunt's gentle voice. "This is Daphne," Mrs. Merivale added, "our dear niece Daphne. You know her through her letters already, and now you and she must be like sisters."

"Yes—indeed, like sisters," the new comer spoke for the first time, and as she bent and kissed Daphne's cheek, the girl felt a bewildered sense of being in a nightmare. The newcomer was so surprising, so wholly unlike what she had expected. This tall, quietly looking woman was so very different from their precocious little cousin of Denis' widow. They had pictured as small and fair, very childlike and clinging—the reality was not in the least like the picture. The real Marjory was beautiful, no one could deny her beauty, but her type of beauty was so different that they had gathered it would be from Denis' letter. The delicately fair skin; the deep eyes; the bronze glory of her hair—all enhanced by the dead black of the gown she wore—were uniquely striking and very lovely. But it was a woman, not a frightened child, who came towards Daphne with a confidence that they had a ring of insincerity.

"How good you are to me," the stranger said tremulously. "I am very good. I—it has all been so dreadful," she shivered, "the terrible time in Australia, and then the shipwreck. This beautiful place is like a haven of refuge, and I can't tell you how thankful I am to be here."

To kindly Mrs. Merivale the words seemed touchingly true; and Daphne resolutely tried to thrust out of her mind the stranger's statement that they had a ring of insincerity.

"I feel as if I had really come home," the deep voice added gently. "And indeed, you have come home, dear." Mrs. Merivale's tones rang with kindly welcome. "Denis's people are here, and you are here, and henceforth you will always be one of us. We want you to feel quite at home here, quite that you are amongst your own people who will take care of you."

"Am I like what you expected?" the newcomer's voice grew as wistful as her eyes. "I had no photograph to show you, and Denis—his accents faltered—"Denis said he would try and describe me to you. But perhaps I shall disappoint you, perhaps I have disappointed you already." Her voice shook most effectively over these last words, and her own mind Nina was saying triumphantly:

"That was a master stroke."

"Dear Denis did not describe you very well," Denis' mother answered a little shakily, her eyes wandering over the tall figure, and resting finally on the beautiful face, "we imagined you would be very small and fair, scarcely more than a child."

"To Denis," again came the effective tremor of the voice, "I always seemed little and young. It was his dear way to call me little, sweetheart, even though I am not really very little. Will you please forgive me for not being exactly what you expected? I will do my best to be a good daughter all the same."

It was not in vain that during a course of varied existence Nina Mansfield had placed her eyes and her voice, and to the fascination of both Mrs. Merivale yielded at once.

like her." Daphne was alone on the December evening two days later, when her lover entered the drawing room at Denbenton Manor, and he drew her to his arms and kissed her gently, before answering her remark. He was tall and good looking, brown eyed and fair haired, and if there were indications of weakness in his sensitive mouth, the general charm of the man made one overlook any shortcomings. His eyes were clear and his voice fell to endear Hugh Brentwood to his many patients, and since his coming to Stanhurst as assistant to the local practitioner, Doctor Barry, the practice had more than doubled itself. His cleverness alone was not responsible for that satisfactory result, though he was undoubtedly a man of unusual ability. But, as one of his village patients put it, he has "a way with him," and the hearts of men, women and children, and chiefly contributed to the great popularity of the young doctor.

His engagement to the Merivale's niece dated from the previous October, they were hoping and planning that their marriage should take place when Hugh should have achieved his ambition and obtained a practice in the large town of Bodminster.

"Why do you hesitate in speaking of young Mrs. Merivale?" he questioned, "Does it mean that you don't like the little new cousin?"

"She is not very little. And she is very sweet to me," Daphne evaded her lover's question, and glanced away from his face into the glowing depths of the fire. "I just want you to see her and give me your opinion about her. I like to know your opinion about everything," she added eagerly.

They were alone in the drawing room, waiting for the doctor to assemble for dinner and Hugh put his arm around her and drew her nearer to him again.

"No one could help being sweet to you," he said, "you are such a dear little soul. Perhaps so much, as I like what a real personality you possess. It always rests me."

Canadian Shells Help in Drive
That the Canadian shell manufacturers are doing vitally important services in support of the great offensive just begun by the British, French and Belgians on the western front is indicated by news in which they are now helping to feed the British guns, and the success of the allies depends on the sustained effort of their artillery. Canadian workshops are producing one million empty shells per month and 15,441 shells per day with fixed ammunition. The latter will be increased to 50,000 per day in the near future.

"Disappointed again."
"How now?"
This fellow told me he was going to show me the beauties of the town."
"Well, didn't he?"
He means that office buildings were prepared to see some feminine loveliness."

Hoax—I wonder where they get their submarine crews?
Joax—Dubno; but I suppose in the low dives would be a good place to look for 'em."

As Kipling Would Say It
If Studyard Kipling had been going to say anything in verse about a bod carrier or plasterer, he would say:
"He milled 'mid the mortar of mingled moisture."

"That old grog certainly had his living room appropriately decorated."
"How was it done?"
"Mostly in fretwork."

When a political party holds a love feast, that indicates it hasn't much of a chance.

What Britain Has Done

American Paper Pays a Splendid Tribute to Britain's Part in the War

The Wall Street Journal gives a very striking answer to the question: What has Great Britain done? It points out that while her navy, her financial credit and a small expeditionary army were all that were asked by the allies, she has swept the seas of German commerce, placed upwards of a million men in the field, and got another two million in readiness; has lent her allies more than \$2,000,000,000 and has conquered every German colony except the Cameroons. Conquering the Wall Street Journal says:

By her own enlightened system of colonial government, the Boer has wiped out the German colony in Southwest Africa, the French Canadians are fighting on the Belgian frontier, the Irish are characteristically fighting in the thickest of the fray, and the supposed seditious Hittites and Islammedans are clearing out all the German political gains in Turkish Asia. And there is more than this. If it were not for the British mastery of the seas, where would our own export trade be? Even with an uncertainty of the ocean, the trade of the world is being kept open. The grudge of the allies, because Germany is in no position to receive it, would not exist at all. To members of the majority of the world, the rights of the rights of neutral and peaceful nations, all the moral issues involved, the present and future interests, can we ask ourselves, with any show of argument, the question: What has Great Britain done?

Do You Think of Safety

Get the Safety Habit and Pass It Along for the Benefit of Others

When you leave your home for your day's work, do you think of safety? Constant care is necessary? Do you, when you arrive at the office, factory, shop, hear in mind your own safety and that of others? To think first of safety means consideration for others; it means lives spared and fewer accidents.

Most accidents can be prevented, but what is each one of us doing to prevent accidents? We must not expect that care will be taken for our safety and never take thought for that of another.

It is estimated that a man's average earning power is \$700 per annum. Suppose of us receive more and some less. Perhaps we are not so lucky. We will be reduced after a serious accident and will be stopped by death. What are you going to do about it? We must think of safety to insure our safety—to insist upon others doing their work in the safe way—to point out to the proper authorities unsafe practices, and unsafe machines—take no chances. It may seem unnecessary to tell you this, but what of each year's toll of life and limb? Get the safety habit and pass it along as an heritage to the children.—Bulletin by Ontario Safety League

Preparing for Spring

Home Gardens and Vacant Lots Should Have Autumn Cultivation

Custom or habit alone explains the fact that the home gardener almost universally leaves his garden plot in a neglected condition until spring. No attempt is made to prepare for the next season's plantings.

If the farmer were to follow this system, the results would be disastrous. In the spring he would find that the soil was too hard and the delay would mean late crops, if any at all.

The garden should be dug in autumn, leaving the earth loose. If new soil is being used, the soil should be turned under a depth of four inches to ensure rotting. Vines, dead leaves, or weeds should be burned, and the ashes, together with a quantity of good stable manure, if available, should be dug well in.

The results of attention to his land in the autumn will fully repay the home gardener in the saving of time in the spring and in increased production.

The amount of prize money for officers and men of the navy which has accumulated since the war is said by the Morning Post to be \$2,000,000. None of this has been distributed and the Post makes the complaint that purchases by the government of confiscated cargoes deprives the navy of prize money.

The Man—If you are so forgetful, how is it you remember me?
The Girl—Lots of times I remember things when the big ones escape my notice.

For Rural Fire Prevention

Suggestions for Reducing Fire Loss on the Farm and in the Village

Farmers and villagers should be among the most active of fire protectors. While most villages have fire departments, few have paid departments. Living isolated from auto pumping fire engines, chemical and other apparatus, and fire alarm boxes, the farmer or the villager must constitute himself an individual fire department. It is in the small village where the stoves, the open fireplaces and the kerosene lamps come into use that the fire danger is greatest. Internal vigilance is the price of safety.

Many country and village homes have a "store room" into which, during the cold months, rubbish and debris are thrown indiscriminately. Newspapers, rags, old clothes, etc., constituting the most inflammable collection are thrown into this room, usually the worst from the fire protection standpoint—in the house. Most villages use the kerosene lamp as a possibly a tallow candle while searching in the cellar or store room. The lamp or candle is put down, a rat runs out and, in the excitement, especially if a woman is present, the light is frequently knocked over and a blaze is almost certain to result. Water is hard to get, pumps freeze and the farmer or villager is powerless when the fire develops.

During the summer, English sparrows carry nest making material into cracks and crannies, building nests close to chimneys and flues. Chimney sweeps should be careful to remove the mortar from the bricks and make holes through which sparks find their way to the sparrows' nest. A mysterious fire results, generally on the coldest night of the year.

All flues and chimneys should be examined before the fires are lighted in autumn. Water should be drawn at night and placed in pails where it will not freeze. Roofs should be examined and cleared of shingles and other spark catchers. The store room should be the most vacant of rooms.

Rats, mice and squirrels should be cleared out. Lanterns should be kept with wicks of proper length. A dirty, short-wicked lantern, full of oil, is a bad fire hazard. All dead hearths should be removed from the house and outbuildings. Sparks travel far on a winter gale and, alighting on dry herbage, are almost certain to start a fire. Most persons who have large yards could well afford to build a small furnace of brick, covering the stack with wire netting, and thus burn refuse without danger. Smoking about barns should be prohibited and lanterns should be kept in safe places. A small electric torch is a good investment where hay and fodder must be reached in the darkness. Matches should be kept in a tin box tightly covered with a lid, and out of reach of small children. No member of the family should search in cupboards or drawers with a match for a light. This is an imperative rule which is frequently violated.

Where wood is the heating fuel, there should be a wide space over the fireplace to stop the sparks. Where coal is used, a wide fender will stop a threatened blaze. Coal, "snapping" out into the room, causes many fires. The place for ashes is a metal can, and the place for the can is where the hay and fodder must be in contact with wood. Because they do not show sparks, is no reason for believing that wood or coal ashes are not dangerous. Remember that ashes, especially the finer kinds, hold heat for a long time.

The foregoing cautions may seem simple but are frequently forgotten. It is the unusual that often happens. Teachers in villages and country schools should educate the children to think of the dangers. One sharp-eyed boy is as good as a fire department.

If Any Are Left

A Reuter dispatch from Amsterdam says that Berlin telegrams announced that Emperor Wilhelm has decided that the uniform of the German army in peace times shall be field gray, the same color used in time of war.

Things Rosy in Germany
The number of bankruptcies in Germany from July 1 to the end of the year was 981, as compared with 1,608 during the same period of last year. The Overseas News Agency announces.

Photographer—Complains, does she? She ought to be grateful.

EFFEIVE MEANS FOR REMOVAL OF GERMAN SUBMARINE PERIL

WILL NOW NO LONGER CONSTITUTE A MENACE

New Means of Dealing with Enemy Submarines Have Been Evolved by Great Britain, and it is Believed That These Methods will Revolutionize Navy Warfare

Great Britain has put into effect a new means of combating the submarine, which, according to official reports to the United States, already have resulted in a loss estimated at between 50 and 70. The report declares that the British admiralty confidently believes, it has crushed the German undersea craft. New modes of offensive and defence that may revolutionize navy warfare, have been adopted, and British naval officers are of the opinion that unless the effectiveness of the submarine is increased, it will no longer constitute a menace.

According to the reports destruction of capture of 50 submarines actually has been reported several weeks ago, and it was regarded as possible that the number has reached 70. A dinner was given recently in London, which was attended by high government officials in celebration of the destruction of the 50th underwater enemy.

While the greatest secrecy is maintained the United States has information concerning the methods which have been employed. A submarine telephone has been developed by which it is possible to detect the approach of a submarine by means of observation boats or stations planted off shore connected with points on the mainland.

Huge nets have been stretched across the channels through which the submarines may be expected to pass and in open waters the spot and waits for the submarine to rise.

New Air Weapon

Germans Are Perfecting a New Aerial Engine

The aerial torpedo invented by a Swedish officer and sold to Krupp may have been the basis of Germany's new air weapon, but even if it is the finished article, the Swedish invention resembles a huge shell fitted with a turbine engine driven by gas pressure. The German air torpedo is more like an airship fitted with propellers driven by electricity and controlled from a Zeppelin by wireless. The German aerial torpedo can, theoretically, remain in the air for three hours, and can be controlled from a distance of two miles. Both weapons are discharged from a tube like a marine torpedo, but in the case of the German invention the tube has two lifting screws are automatically started at the moment of discharge.

In shape, this torpedo of the future, which is about ten feet long, resembles the submarine weapon. It is composed of two cases, the outer of thin chrome metal, the inner of material similar to that used in Zeppelins. About one-sixth of the space at the rear is occupied by an electric accumulator at the bottom, and an electric motor generator secured to the top. The machinery is controlled by Hertzian waves, acting on the Telefunken system of wireless, and it is claimed that up to a distance of two miles the air torpedo can be steered at will.

The air torpedo is inflated with water gas and compressed gas, but as it is heavier than air, it must be kept to the surface, and the motive power is supplied by propellers. Both screws and propellers are connected with the same shaft, which runs through the body of the torpedo.

When the air torpedo, after flying through the air, hovers immediately over the selected spot, it is made to assume a vertical position, the lifting horizontal screws and propellers are stopped, and the torpedo dives to the ground, carrying a large quantity of high explosive charge at its nose. The charge explodes on contact like an ordinary shell, and it is said that in two torpedoes there is sufficient explosive force to destroy the Tower of London.

Originally, these torpedoes were destined to be carried exclusively by Zeppelins, but owing to certain improvements it has now been found they can be carried by small warships. According to information, German purposes to use torpedoes of the air against the British navy, and for that purpose small, swift craft, armed only with aerial torpedoes, are building or have already been built.

Saskatchewan Feats

The campaign carried on for several years by the board of trade at Saskatoon to encourage producers to engage in fruit raising is beginning to have effect, and some excellent orchards of small fruits have resulted this season. These orchards include the usual hardy varieties, also some fine showings of plums, apples, cherries, and even grapes, which are being raised of the Concord variety have this year borne in the open air.

The vacancy in the position of statistical officer of the labor department has been filled by the appointment of Bryce M. Stewart, who for some time has been in the department. Mr. Stewart succeeds Robert H. Coats, the new census commissioner. He is a native of Brockville and graduated at Queen's and Columbia Universities.

A Good Ally

A Frenchman Pays a Tribute to the Navy of Britain

I write this letter from one of the British warships which the Germans declared they sank during one of the encounters which cost them so dear. The admiral commanding it is relating the phases of the battle and showing us the parts which the vessel which was hit by the enemy's projectiles. They only damaged the ship, and today it is completely repaired and ready for fresh fight. Around us is stationed under steam a wonderful fleet of the most formidable and midship units which move to the world that Great Britain's naval renown has lost nothing of its legitimacy.

It is a great object lesson for me to be able to contemplate—after seeing the British army, which watches over a part of our northern front—the navy which assures the freedom of our communications, the security of our coast, and the final restoration of Belgium to independence and fullness of its rights.

How I wish I could tell everything. I am sorry I cannot. But I need only hint and what I must conceal will be forgiven.

It can no longer be concealed that the number of German submarines destroyed since the debut of their operations is very considerable.

One of the principal results of Great Britain's maritime action has been to open to our northern front an attempted blockade which the Germans, in defiance of the laws of war, imagined they could maintain.

Undersea boats adopting these tactics have been the most difficult to watch. Here the aeroplanes have shown their great usefulness as the comparatively shallow water along much of the British coast makes it possible for them to observe from the surface and take a hurried observation to see the ships lying on the bottom. The aeroplane notes the position and notifies the nearest destroyer or patrol boat, which speeds to the spot and waits for the submarine to rise.

Roar of French Guns

Uncanny Sensation as of the Underground Growling of Distant Volcano

The Cologne Gazette publishes the following account by the German author, Dr. George Werner, of the terrific bombardment which preceded the French attack in Champagne.

It is Friday morning. During the night we have been hearing the sound of distant gunfire, which in volume and duration has increased. Yesterday evening the bombardment was at its height. It died down towards midnight, but about 4 o'clock this morning it started afresh with the unprecedented intensity typical of a big scale bombardment with shot following shot in one unbroken growl of thunder like the roll of a distant cannon.

One hour—two hours—four hours—still there was no end to it. The like of it had not been heard since the days when the German advance troops had taken over this section. Where is it? What does it mean?

The thunder of distant guns can be better heard upon the hills than in the valley, for they penetrate into the hill which rises outside the town. I have just returned. It is now 11 a.m., and the guns are still thundering. The extraordinary roar of bombardment in the Argonne, which was the prelude to a French attack on the French front, has lasted for eight to eleven—three hours, and the other bombardment has already been going on more than twice as long.

The whole atmosphere is in a state of dull vibration. It seems as if one perceived the sound not only with the ears, but with the whole physical sensation of being shaken by air waves. It is as if the sound came up from the earth, and felt as if it were a distant volcano in eruption, shaking the earth's crust for miles around, and making it tremble like a man in a fit of rage.

Large War Orders

Inquiries From Allies For Blankets, Overcoats, Etc.

Inquiries are being made by the different nations of the allies, about the possibility of getting clothing, blankets and other such equipment manufactured in Canada. The Canadian mills are anxious to serve the Canadian government first and are now busy with the home government's orders. They will be busy until December 1 on this. However, they will be able to make several for other countries. Through the Textile Association an order for 100,000 blankets, worth probably \$1,000,000, has been placed with Canadian mills for the British government.

Mr. F. Barry Hayes of the Toronto Car and Coach Co. is now negotiating with the Russian government for an order for overcoats. There seems no doubt that the order will come to Canadian mills from Russia.

It is understood from other sources that the Russian government has also placed several million dollars' worth of blankets. This order awaits the acceptance of the Canadian mills. The Italian government is also said to have ordered a million dollars' worth.—Toronto Globe.

If it is a thing a woman never is likely to need, she is pretty sure to put it carefully away.

VIVIPRESORPTION OF HOW BRITISH LOOK THE OF LOS

ELABORATENESS OF THE GERMAN TRENCHES

Germans Fought Desperately and the Viciousness of Their Resistance was Due to Their Rage Over the Loss of Their Dugouts Which Cost Them so Much Labor

The scene of the British attack in the Lens region is a flat mining country—slag heaps, mine pits, ruined buildings, splintered and felled trees and earthenworks churned by explosions with slight rising ground toward Loos and Lens.

Nothing is visible except the soft spots of shrapnel bursting and volumes of black smoke from British and German high explosive shells, marking positions where the British troops are organizing their guns, and the Germans are preparing a new defensive line.

It is with infinite satisfaction to the British who had long looked at the eye some twin towers of the mining works at Loos that they now have in their possession this German position.

The normal population of Loos is ten thousand poor miners and their families. Three hundred of these remained during the battle, taking shelter in the cellars of their wrecked houses. The women and children who cooked for the Germans, is now cooking for the British.

As the skirmish line approached the town it saw six women and a child coming toward it in the midst of the battle. Some of the British soldiers turned away to grieve themselves before they could get the women under some sort of shelter two of them were wounded.

The elaborateness and permanency of the German trenches indicated the apparent conviction of the Germans in the security of their lines. Dugouts of thirty feet depth, were cemented and contained electric lights and arm chairs. Some of them were lapped with straw to high explosive shells of big calibre. The British bombardment cut the wire in front of the German trenches and the German trench was left a mass of rubble and the digging trenches and traverses into irregular piles of earth. Under such a falling of shells it was suicidal for the Germans to attempt to remain outside the dugouts or to try to man their machine guns or use their rifles.

Some of the British soldiers were perfecting the British infantry sprang over the parapets at a given moment. Sprinting toward the German trench they arrived almost without opposition. Then the German trench was theirs with the Germans who were alive or dead. The trench was perfect in its construction. Others had their openings blown in by shell explosions, and their occupants were either buried or suffocated. When a German soldier was seen by the British soldiers, with bayonets fixed or bombs in hands, appeared at the entrance to the trench, he was still inside or perhaps just starting out. All in the dugouts might surrender.

Big Irrigation Convention

Many Prominent Speakers to Deliver Addresses at Convention to be Held at Bassano

In connection with the Western Canada Irrigation convention to be held at Bassano, Alta., Nov. 23 to 25, an excellent program of addresses has been arranged. The most prominent met, who have signified their intention of attending the convention are the following:

I. D. O'Donnell, supervisor of irrigation, U.S. reclamation service, Billings, Montana; "Better Farming," James Speakman, president United Farmers of Alberta, Calgary; W. H. Hutton, commissioner, commissioner, Denver & Rio Grande Railway, Denver Colorado, "Practical Irrigation."

E. A. Howes, dean faculty of agriculture, University of Alberta, Edmonton; "Agricultural Education in Alberta"; J. T. Hinkle, third vice-president International Irrigation Congress, Hermiston, Oregon; "The Alfalfa Farmer."

W. H. Fairhead, superintendent Dominion Experimental Farm, Lethbridge; "Crop Rotations on Irrigated Land." William Young, controller of water rights, Department of Lands, Victoria; "The Success of Water Users Communities in B.C."

S. G. Porter, irrigation branch, department of agriculture, Calgary; "Alfalfa, the Basis of Successful Irrigation Farming." E. A. Goldie, instructor in household science, Alberta government, Olds; "Advance of Household Science Training for Country Girls." W. E. Scott, deputy minister of agriculture, B.C. government, Victoria; "The British Columbia Irrigation Experiment." G. H. Hutton, superintendent Dominion Experimental Farm, Lacombe; "Grading up a Drainage System." W. E. Scott, deputy minister of U.S. irrigation investigations in Idaho; "The Growing of Alfalfa."

S. Hutton, vice-president United Farmers of Alberta, Lethbridge; "The Future of Irrigation in Southern Alberta." D. J. Wyle, M.L.A., hon. president Cypress Hills Water Users' association, Maple Creek, Sask.; "Live Stock of the Prairie."

Others who have accepted invitations to be present and address the delegates are Hon. W. R. Motherwell, minister of agriculture, and Stanley Ewan; E. F. Drake, superintendent of irrigation, Ottawa; Hon. W. R. Ross, minister of lands, and Hon. C. B. H. Peters, commissioner of irrigation, department of the interior, Calgary; T. A. Hargrave, president, Cypress Hills Water Users' association, Portland, Oregon; G. A. Varnoch, president Lethbridge Board of trade; J. S. Dennis, assistant to the president, C.P.R.; etc.

R. M. Winslow, secretary B.C. Fruit Growers' association, "Getting British Columbia Fruit to the Prairie Farmer."

Dr. J. G. Rutherford, C.M.G., superintendent agriculture and animal industry, C.P.R., Calgary, "Livestock on an Irrigated Farm."

G. H. Hutton, irrigation branch, department of the interior, Calgary; "Field Irrigation Investigation by the Irrigation Branch, Department of the Interior."

Others who have accepted invitations to be present and address the delegates are Hon. W. R. Motherwell, minister of agriculture, and Stanley Ewan; E. F. Drake, superintendent of irrigation, Ottawa; Hon. W. R. Ross, minister of lands, and Hon. C. B. H. Peters, commissioner of irrigation, department of the interior, Calgary; T. A. Hargrave, president, Cypress Hills Water Users' association, Portland, Oregon; G. A. Varnoch, president Lethbridge Board of trade; J. S. Dennis, assistant to the president, C.P.R.; etc.

The Hon. L. Sifton, premier of Alberta, will open the convention and officially welcome the delegates. Hon. H. D. Cameron, minister of agriculture and president of the association will be in the chair. J. S. Dennis, assistant to the president, C.P.R., will assist him.

Defect in Farming System
"Every farm in the United States should be an efficient organized factory, busy the whole year round," declared Charles Dillon of Topeka, Kan., in an address before the national agricultural congress at Omaha. He added that the farmer should sell his products through co-operation with factories. Dillon also declared that the fundamental weakness of the American farm as an economic institution was its failure to give profit to the employer, to the owner, the hired man and the family throughout the year.

Stocks of "baiting" mow are being converted into an ingenious set of pistons at a co-operative distillery at Pointe-aux-Lacs, which has been supplied with a large quantity of beet roots to government explosive factories, where it is used in the manufacturing of gunpowder.

Here are the Self Starters — innocent looking typewriter keys — that force an automatic speed gain of 15% to 25% on ordinary correspondence.

IMPLEMENTS : COAL : FLOUR

OUR MOTTO:—A square deal for a round dollar.

WHY NOT?

If a female duke is a duchess,
Would a female spook be a spuchess?
And if a male goose is a gander,
Then would a male moose be a man-
der?

If water you freeze is frozen,
Is the maiden you squeeze, then,
squeozed?

If a thing you break is broken,
Would a thing that you take be token?

If the plural of child is children,
Would the plural of wild be wildren?
If a number of cows are cattle,
Would a number of bows be battle?

If a man who makes plays is a play-
wright,
Would a man who makes hay be a
haywright?

If a person who fails is a failure,
Would a person who quails be a quail-
ure?

If the apple you bite is bitten,
Would the battle you fight be bitten?
And if a young cat is a kitten,
Would a young rat be a ritten?

If a person who spends is a spendthrift
Would a person who lends be a lend-
thrift?
If drinking too much makes a drunk-
ard?
Would thinking too much make a
thinkard?

But why pile on the confusion?
Still, I'd like to ask in conclusion:
If a chap from New York's a New
Yorker,
Would a fellow from Cork be a
Corker?
—Life.

The 10th Musical Competition Festival, Province of Alberta, will be held in Edmonton on May 22-3-4, of this year. The competition is open amateurs residing in Alberta, Sask., or B. C., and church choirs, choral societies, quartettes, etc., along with piano and violin classes.

Full details will be given in this paper, shortly.

Statistics show

That for the first six months of 1916 there was a big increase in fire losses in Canada.

Your home or place of business may be included in the losses of the next six months.

Better have them insured at once and not run the risk of being left penniless, in case of a fire.

EFFECTIVE MEANS FOR DEFEAT OF SUBMARINE PERIL

WILL NOW NO LONGER CONSTITUTE A MENACE

New Means of Dealing with Enemy Submarines Have Been Evolved by Great Britain, and it is Believed That These Methods will Revolutionize Navy Warfare

Great Britain has put into effective operation means of combating the submarine, water, according to official reports to the United States, already have resulted in a loss estimated at between 50 and 70. The reports declare that the British admiralty confidently believes it has crushed the German undersea craft. New means of offensive and defence that may revolutionize navy warfare have been adopted, and high British naval officers are of the opinion that unless the effectiveness of the submarine is increased, it will no longer constitute a menace.

According to the reports destruction or capture of 50 submarines actually had been reported several weeks ago, and was regarded as possible that the number has reached 70. A dinner was given recently in London which was attended by high government officials in celebration of the destruction of the 50th underwater enemy.

While the greatest secrecy is maintained the United States has information concerning the methods which have been employed against the submarine. The British admiralty has been developed by which it is possible to detect the approach of a submarine by sound from observation boats or stations planted on shore connected with points on the mainland.

Huge nets have been stretched across the channels through which the submarines may be expected to pass and in open waters, near steamship lanes or in the vicinity of warships,

nets suspended with floats have been cast. Then, patrols congregate and when the submarine comes to the surface, as it eventually must, it is destroyed by gun fire or captured.

A special type of mine also has been devised which is laid in large fields that have proved particularly dangerous to submarines approaching at anchor.

The German methods of supplying submarines with oil from concealed places along the coast has been disposed of. This compels the boats to return to their bases at more frequent intervals.

Aeroplanes are exceedingly useful in locating submarines. They can detect one even 100 feet beneath the surface. It is a habit of the German submarines to slip into favorable position along the steamer lanes and lie on the bottom for long periods, rising occasionally for observation. As the batteries are not exhausted, the boats not being in motion, only brief stay on the surface is necessary to renew the air supply and take a hurried observation.

Undersea boats adopting these tactics have been the most difficult to watch. Here the aeroplanes have shown their great usefulness as the observation boats have been able to detect the British coast makes it possible for the aeroplanes to operate in the air.

The aeroplanes lying on the bottom, the aeroplanes rising to the surface and notifying the nearest destroyer or patrol boat, which speeds to the spot and waits for the submarine to rise.

Roar of French Guns

Uncanny Sensation as of the Underground Growling of Distant Volcano

The Cologne Gazette publishes the following account by the German author, Fritz Werner, of the terrific bombardment which preceded the French attack in Champagne:

It is Friday morning. During the night we have been hearing the sound of distant gunfire, which in volume and duration exceeded anything experienced since we have been here. Yesterday evening the bombardment was exceptionally lively. Then it died down towards midnight, but about 4 o'clock the morning broke with the unprecedented intensity typical of a big scale bombardment. Where is it? Where is it? The broken growl of thunder like the roll of drums.

One hour—two hours—four hours—it still goes on and on. It is so close to it. It had not been heard since the days when the first German advance passed like a storm over this section. Where is it? Where is it? What does it mean?

The thunder of distant guns can be heard better upon the hills than in the valley, so we went up to the top of the hill which lies outside the town. I have just returned. It is now 11 a.m., and the guns are still thundering the extraordinary roar of a bombardment. The attack which was the prelude to a French attack on the Marle-Therese held works. It has lasted from eleven to eleven—three hours. The attack which was the prelude to a French attack on the Marle-Therese held works. It has lasted from eleven to eleven—three hours. The attack which was the prelude to a French attack on the Marle-Therese held works. It has lasted from eleven to eleven—three hours.

The whole atmosphere is in a state of great excitement. It seems as if one perceived the sound not only with the ear, but as if one had the physical sensation of the sound shaking the waves. It is as if the sound came up from unknown depths of the earth. Indeed, more than anything it is like the uncanny underground growling of a distant volcano in eruption, shaking the earth's crust for miles around, and making it tremble like a man in a fit of rage.

Large War Orders

Inquiries From Allies For Blankets, Overcoats, Etc.

Inquiries are being made by the different nations of the allies, about the possibility of getting clothing, blankets, and other such equipment from the United States. The Canadian mills are anxious to serve the Canadian government first and are at present busy with the home government's orders. They will be busy until December 1 on this. Then, however, they will be able to make a great deal of work for the allies. The Textile Association an order for 100,000 blankets, worth probably \$300,000, has been placed with Canadian mills. Mr. F. Barry Hayes of the Toronto Carpet Company has been negotiating for the purchase of the Canadian mills for overcoats. There seems no doubt that big orders will come to Canadians from Russia.

It is understood from other sources that the Russian government has also ordered several million dollars' worth of blankets. The order awaits the acceptance of the Canadian mills. The Italian government is also said to have ordered a million dollars' worth. —Toronto Globe.

It is a thing a woman never is likely to need, she is pretty sure to put it carefully away.

A Good Ally

A Frenchman Pays a Tribute to the Navy of Britain

I write this letter from one of the British warships which the Germans declared they sank during one of the encounters which cost them so dear. The admiral commanding the fleet is now in the phases of the battle and showing me the parts of the vessel which were hit by the enemy's projectiles. They only managed the shot and today it is completely repaired and ready for a fresh fight. Around us is stationed under steam, a wonderful fleet of the most formidable and mightiest units which prove to the world that Great Britain's naval renown has lost nothing of its legitimacy.

It is a great object lesson for me to be aboard a British warship. I have seen the British army, which watches over a part of our northern front—the navy which assures the freedom of our communications, the security of our coasts, and the final restoration of Belgium to independence and fullness of its life.

How I wish I could tell everything. Unfortunately, I am bound to much reserve and what I must confess need only hint and what must confess will be divined.

It can no longer be concealed that the number of British submarines destroyed since the debut of their operations is very considerable. One of the principal results of Great Britain's maritime action has been to render ineffective the attempted blockade which the Germans, in defiance of the laws of war, imagined they could accomplish by employing the most formidable naval weapon which science has placed in their hands. All the precautions that long experience of the sea and its battles have suggested have been taken. Skill, boldness, courage, energy have met all the needs of the case. As surely the submarines of Admiral Tirpitz have not been able to break through the British blockade in history, nor their exploits. They will continue to show in attacking warships an audacity which their cautious nature first to recognize, but their impotence becomes manifest in crimes against private individuals and the danger of their operations.

Their field of action is limited, their power of destruction is small, and they are too slow to which they expose themselves, and they already suffered, cannot indefinitely be made good.

The spectacle of the land army created by Lord Kitchener has roused my admiration of the resources and determination of the British army. The spectacle of the naval forces, organized and led by admirals, who are heirs of the most memorable traditions of the sea, confirms my convictions that nothing will bring low or overcome the maritime effort of our mighty ally—Stephen Pichon.

Brutality of the Germans

Russian Soldiers I Found With Their

Russians charge the Germans with resuming the campaign of atrocities with which they sought to frighten the Russian people into submission. The war, but which had diminished in recent months. Finding the towns and villages evacuated by the Russians, the Germans had no choice but to retreat. The atrocities which the Russians had committed in the towns between the towns becoming greater the further they penetrated into the country, and the more they advanced the more they were met by the Russians' troops, some of the invaders are declared to display a ferocious and revengeful temper.

THE BRITISH TOOK THE TOWNS OF LOOS

ELABORATENESS OF THE GERMAN TRENCHES

Germans Fought Desperately and the Viciousness of Their Resistance Was Due to Their Rage Over the Loss of Their Dugouts Which Cost Them so Much Labor

The scene of the British attack in the Lens region is a flat mining country—slag heaps, mine pits, ruined buildings, splintered and felled trees and earthenworks burned by explosions—with slightly rising ground toward Loos and Lens.

Nothing visible except the soft puffs of shrapnel bursting and volleys of black smoke from British and German high explosive shells, marking positions where the British troops are organizing their guns and the Germans are preparing a new defensive line.

It is with infinite satisfaction to the British, who had long looked at the eyes of the German population of the mining towns of Loos that they now have in their possession this German position. The church at Loos which had been used as an observation post is a heap of stone as the result of the bombardment preceding the attack.

One of the principal results of the German population of Loos is ten thousand poor miners and their families. Three hundred of these remained during the battle, taking shelter in the cellars of the British soldiers' homes. One old woman, who cooked for the Germans, is now cooking for the British.

As the skirmish line approached the town I saw six women and a child coming toward it in the midst of the battle. The British soldiers turned away to rescue them, but before they could get the women under the shelter of two of them were wounded.

The elaborateness and permanency of the German trenches indicated the apparent conviction of the Germans in the security of their lines. Dugouts of thirty feet depth, were cemented and concrete walls of the British soldiers' chairs. Some of them were impenetrable even to high explosive shells of big calibre. The British bombardment had done little to the German trenches to bits and battered the British trenches and traverses into irregular shapes. The German soldiers falling of shells it was suicidal for the Germans to attempt to remain outside the dugouts or to try to man their machine guns or other rifles.

When the artillery work was perfected the British infantry sprang over the parapets at a given moment. Sprinting toward the German trench they arrived almost without opposition. The German trench was theirs, with the Germans who were alive huddled in their caves. Some of the dugouts had been demolished and had in their front the German bodies mixed with the debris. Other than their openings blown in by shell explosions, the German trenches were either buried or suffocated. When a dugout had been unharmed, the British soldiers, with bayonets fixed or their intention of attacking the entrance to find the Germans still inside or perhaps just starting out.

All in the dugouts might surrender.

Big Irrigation Convention

Many Prominent Speakers to Deliver Addresses at Convention to be Held at Bassano

In connection with the Western Canada Irrigation convention to be held in the city of Alberta, August 25, an excellent program of addresses has been arranged. Among the most prominent men who have signified their intention of attending the convention, and who have promised to speak are the following:

D. O. Howell, supervisor of irrigation, U.S. reclamation service, Billings, Montana, "Better Farming." James Speakman, president United Farmers of Alberta, "Agriculture." W. H. Olin, agricultural commissioner, Denver & Rio Grande Railway, Denver Colorado, "Practical Irrigation."

E. A. Howes, dean faculty of agriculture, University of Alberta, Edmonton, "Agricultural Education in Alberta."

J. T. Hinkle, third vice-president International Irrigation Congress, Hermon, Oregon, "The Alfalfa Farmer."

W. H. Fairfield, superintendent Dominion Experimental Farm, Lethbridge, "Crop Rotations on Irrigated Land."

William Young, controller of water rights, department of lands, Victoria, B.C., "The Success of Water Users' Committees in B.C."

S. G. Porter, irrigation branch, department of the interior, Calgary, "Alfalfa, the Basis of Successful Irrigation Farming."

Marjorie M. Goldie, instructor in household science, Alberta government, Edmonton, "Household Science." Science Training for Country Girls.

W. E. Scott, deputy minister of agriculture, B.C. government, Victoria, B.C., "Agricultural Opportunities in British Columbia."

G. H. Hutton, superintendent Dominion Experimental Farm, Lethbridge, "Grading up a Dairy Herd."

Don H. Stark, formerly in charge of S. S. Irrigation investigations in Idaho, "The Growing of Alfalfa."

S. S. Dunham, vice-president United Farmers of Alberta, Lethbridge, "The Future of Irrigation in Southern Alberta."

D. J. Wylie, M.L.A., hon. president Cypress Hills Water Users' association, Maple Creek, Sask., "Live-

or, on the other hand, if a British soldier started to enter or even showed himself, he was received with a fusillade. In case of refusal to surrender, bombs were thrown into the dugout without the thrower of them exposing himself. The Germans surviving the explosion usually gave in, though not always, for some of them died to the last man.

Some incidents had a humorous as well as a tragic side. In these sudden encounters at close quarters, where the charging British met a German emerging from his dugout, the bayonet, bombs and even fists were sometimes brought into play in the ensuing melee.

One difficulty was the gathering and guarding of prisoners in such a confined space as their regular wrecked trenches. With rifles and bayonets lying about, the Germans, even after capitulating, were likely to seize them and rush to the cover of a traverse trench or into a shell crater and new the night.

The Germans fought desperately at the viciousness of their attacks apparently was due to rage over the loss of their comfortable dugouts, which had cost them so much painstaking labor and the unpleasant prospect of a winter in the mud building caves.

The horror of the army during the action presented a wondrous varied scene, which was the more concentrated because of the narrow front of the operations. The troops were constantly walking back, the steady tramp of fresh regiments going forward, processions of swift, smooth running motor ambulances, whose burdens would be back in England in 24 hours, longer and longer and armless processions of powerful motor trucks loaded with shells to feed the hungry, ever-thundering unseen guns, troops of the reserves in the field or beside the gorged roads, waiting their call, while the French population stood in the streets and asked for the latest news.

At a place near the front a park of captured guns guarded by a pacing British sentry seemed an attractive more symbolic of success to inhabitants than to the parties of German prisoners. Three thousand British trophies is a Russian machine gun taken by the Germans from the Russians, the machine gun front and now taken by the British.

The German prisoners were well clothed, better than those in their comfortable dugouts, where they were caught by surprise, but evidently they appreciated the generosity of the British. The British prisoners were taken by the British, which was a small percentage of the German loss.

R. M. Winslow, secretary B.C. Fruit Growers' association, "Grating British Columbia Fruit to the Prairie Farmers."

Dr. J. G. Rutherford, C.M.G., superintendent agriculture and animal husbandry, department of the interior, "Livestock on an Irrigated Farm."

G. D. Walters, irrigation branch, department of the interior, Calgary, "Field Irrigation Investigation by the Irrigation Branch, Department of the Interior."

Others who have accepted invitations to be present and address the delegates are Hon. R. A. Rothwell, minister of agriculture, Saskatchewan; E. F. Drake, superintendent of irrigation, department of the interior, minister of lands, British Columbia; P. H. Peters, commissioner of irrigation, department of the interior, California; T. A. Hargrave, president, Cypress Hills Water Users' association, Saskatchewan; A. B. Thompson, president, Oregon Irrigation Congress, Portland, Oregon; G. A. Marnoch, president Lethbridge Board of trade; J. S. Dennis, assistant to the president, C.P.R. etc.

The Hon. A. L. Sifton, premier of Alberta, will open the convention and officially declare the opening of the season.

The Hon. Duncan Marshall, minister of agriculture and president of the association, will be in the chair. J. S. Mavor, chairman of the local board of control, will assist him.

Defect in Farming System

"Every farm in the United States should be an efficiently organized factory, busy the whole year around," declared Chas. D. W. Topeka, in an address before the Farmers' National congress at Omaha. He added that the farmer should sell his products through co-operatives, not factories. Mr. Dillon declared that the fundamental weakness of the American farm was the lack of an institution to give profitable employment to the owner, the hired man and the family throughout the year.

Stocks of choline now are being converted into an ingredient for explosives at a co-operative distillery at Pointe-à-la-Paix, which has been supplying clear alcohol extracted from beet roots to government explosive factories, where it is used in the manufacturing of gunpowder.

New Air Weapon

Germans Are Perfecting a New Aerial Engine

The aerial torpedo invented by a Swedish officer and sold to Krupp may have been the basis of Germany's new air weapon, but certainly it is not the finished article. The Swedish invention resembles a huge shell fitted with a turbine engine driven by gas pressure, the German air torpedo is more like an aircraft, with propellers driven by electricity and controlled from a Zeppelin by wireless. The German aerial torpedo, planted electrically, remain in the air for three hours, and can be controlled from a distance of two miles. The weapons are discharged from a tube like a marine torpedo, but in the case of the German invention two propellers and two lifting screws are automatically started at the moment of discharge.

In shape, this torpedo of the air, which is about seven feet long, resembles the submarine weapon. It is composed of two cases, the outer of thin chrome nickel and the inner of material similar to the fireproof Zeppelins. About one-sixth of the space at the rear is occupied by an electric accumulator or battery, and the electric motor generator secured to the top. The machinery is controlled by Hertzian waves acting on the telefunken system of wireless, and it is claimed that up to a distance of two miles the air torpedo can be steered at will.

The air torpedo is inflated with water gas and compressed gas, but it is heavier than the air, two lifting screws work under the body to keep the torpedo in the air, while the motive power is supplied by propellers. Both sets of propellers are connected with the same shaft, which runs through the body of the torpedo.

When the air torpedo, after flying through the air, hovers immediately over the selected target it is made to assume a vertical position, and the horizontal screws and propellers are stopped, and the torpedo dives to the ground, carrying a large quantity of high explosive charge at its nose. The charge explodes on contact like an ordinary shell, and it is said that in two torpedoes there is sufficient explosive force to destroy the Tower of London.

Originally, these air torpedoes were destined to be carried exclusively by Zeppelins, but owing to certain improvements it has now been found they can be manipulated from warships. According to information, Germany purposes to use torpedoes of the air against the British fleet, and for that purpose the air torpedoes, armed only with aerial torpedoes, are building or have already been built.

Saskatchewan Fruits

The campaign carried on for several years by the board of trade at Saskatoon to induce small farmers to engage in fruit raising, is beginning to have effect, and some excellent orchards of small fruits have resulted this season. These fruits include the usual hardy varieties, such as raspberries, and showings of plums, apples, cherries, and even grapes, of which some fine vines of the Concord variety have this year borne in the open air.

The vacancy in the position of statistician of the labor department has been filled by the appointment of Bryce M. Stewart, who for some time has been in the department.

Mr. Stewart is a native of Robert H. Coats, the new census commissioner. He is a native of Brockville and graduated at Queen's and Columbia Universities.
